

MY JOB. OUR INDUSTRY. OUR FUTURE!

To all parties in the Bundestag and employers

Just look at our achievements: We develop machines that move the world. We create technologies that improve our lives. We work hard for prosperity in Germany.

Now this prosperity is under threat. Factories are closing and jobs are being cut. **This endangers livelihoods and social cohesion. Politicians have failed to deliver. Businesses have missed the tide of change. Now we are being asked to pay for it. That's the wrong way!**

We are ready to embrace change. **But only on one condition:**
We want a future for all of us.

OUR DEMANDS:

1. Our jobs in the industry need to be secured – socially, ecologically and sustainably

A strong industry creates prosperity. We demand investments in sustainable jobs, new technologies and renewable energies – in every business, in all companies, in the countryside and in the city. We feel that the state should only commission and support companies that comply with collective labour agreements, secure jobs and preserve locations.

2. Fair financing, even distribution of costs

Of course, change comes at a cost. However, the burden should be shared evenly. Therefore, we demand higher taxes for the wealthy. The debt brake needs to be reformed in order to open the way for investments in our future.

3. Security for all – through good work and a strong welfare state

Nobody should be left behind. The welfare state needs to build bridges. We need secure, good pensions, fair working hours and a working healthcare system. Education needs to be promoted, and training and further education need to be bolstered. In this way, we can ensure that everybody can play an active role in shaping change.

Let's fight for our future together! Support our demands to the future federal government and employers with your signature.

JOIN US ON THE STREETS ON 15 MARCH. BECAUSE IT MATTERS NOW!
